

Resolving Zimbra Monitor Server Status Discrepancies

In the **Zimbra Web Administration Console**, some or all services may be incorrectly displayed as **stopped**. However, when running the following command in the terminal, all Zimbra services appear to be running:

```
$ sudo su - zimbra -c 'zmcontrol status'
```

Example Output:

Host mail.example.com

amavis	Running
antispam	Running
antivirus	Running
dnscache	Running
ldap	Running
logger	Running
mailbox	Running
memcached	Running
mta	Running
opendkim	Running
proxy	Running
service webapp	Running
snmp	Running
spell	Running
stats	Running
zimbra webapp	Running
zimbraAdmin webapp	Running
zimlet webapp	Running
zmconfigd	Running

Resolution Steps

1. Fix File Permissions

Ensure Zimbra file permissions are correctly set:

```
sudo /opt/zimbra/libexec/zmfixperms -extended
```

2. Install and Enable rsyslog

Zimbra relies on rsyslog for service monitoring. Make sure it is installed and enabled:

For Debian / Ubuntu:

```
sudo apt update
sudo apt install rsyslog
sudo systemctl enable rsyslog
```

For RHEL / CentOS / Rocky Linux:

```
sudo dnf install rsyslog -y
sudo systemctl enable rsyslog
```

3. Configure Remote Rsyslog (if applicable)

If using a **remote rsyslog server**, update the configuration:

```
sudo vim /etc/rsyslog.conf
```

Uncomment the following lines:

```
$ModLoad imudp
$UDPServerRun 514
```

Restart the rsyslog service:

```
sudo systemctl restart rsyslog
```

4. Enable Zimbra to Output System Logs

Run the following script to set up logging:

```
sudo /opt/zimbra/libexec/zmsyslogsetup
```

5. Verify and Configure zimbraLogHostname

Check the current log hostname:

```
sudo su - zimbra -c 'zmprov gacf | grep zimbraLogHostname'
```

If it does not match the hostname of the logger monitor, update it:

```
sudo su - zimbra -c 'zmprov mcf zimbraLogHostname <logger-monitor-hostname>'
```

6. Initialize Logger Services

Re-initialize the logger services:

```
sudo su - zimbra -c /opt/zimbra/libexec/zmloggerinit
```

```
sudo systemctl restart rsyslog
```

7. Update Zimbra Authentication Keys

```
sudo su - zimbra -c 'zmupdateauthkeys'
```

8. Restart Zimbra Services

You can restart all Zimbra services:

```
sudo su - zimbra -c 'zmcontrol restart'
```

Or just restart the logger-related services:

```
sudo su - zimbra -c 'zmloggerctl restart'
```

```
sudo su - zimbra -c 'zmlogswatchctl restart'
```

9. Verify in Zimbra Web Administration

Log in to the **Zimbra Web Administration Console** and verify that service statuses are now correctly displayed.
